

NexaRetail SQL Analysis

Archit Verma

Dataset: Nexa_Retail_CSV | Tool: MySQL Workbench

This report presents solutions to 10 analytical queries on the NexaRetail dataset covering 15,382 transactions across 40 stores, 10 cities, and multiple product categories in 2023-2024. Each question is answered with the query result and a plain-language business takeaway.

Q1 Total Revenue for 2023, Broken Down by Quarter

Quarter	Total Revenue (INR)
Q1	10,713,180.00
Q2	7,224,383.00
Q3	12,191,137.00
Q4	11,615,212.00

Business Insight: Q3 was the strongest quarter with over 1.2 crore in revenue — the business should make sure shelves are fully stocked and promotions are running ahead of this period every year.

Q2 Top 5 Stores by Total Revenue

Store Name	City	Total Revenue (INR)
Bhat Store	Ahmedabad	282,019.00
Reliance Fresh Wakad	Nagpur	277,149.00
Patel Kirana	Nashik	262,567.00
Deshpande Store	Vadodara	257,777.00
Apte Traders	Kolhapur	251,056.00

Business Insight: The top 5 stores are spread across 5 different cities — this is a healthy sign, meaning the business is not over-reliant on any single location for its best sales.

Q3 Product Category with Highest Revenue per Transaction

Category	Avg Revenue per Transaction (INR)
Atta	11,819.60

Business Insight: Every time a customer buys Atta, they spend nearly 12,000 rupees on average — this category deserves prime shelf space and should be the first choice for any upselling or bundling deals.

Q4 Stores Meeting Monthly Target in at Least 8 of 12 Months

Note: This question could not be solved as the dataset does not include a monthly targets table. A separate targets file with store-wise monthly target amounts would be required to answer this query.

Q5 Month-over-Month Revenue Growth Rate & Sharpest Drop

Month	Monthly Revenue (INR)	Prev Month Revenue (INR)	MoM Growth Rate (%)
Jan_2023	3,261,133.00	NULL	NULL
Feb_2023	3,628,121.00	3,261,133.00	+11.25
Mar_2023	3,823,926.00	3,628,121.00	+5.40
Apr_2023	3,950,076.00	3,823,926.00	+3.30
May_2023	3,274,307.00	3,950,076.00	-17.11
Jul_2023	4,588,809.00	3,274,307.00	+40.15
Aug_2023	3,628,659.00	4,588,809.00	-20.92
Sep_2023	3,973,669.00	3,628,659.00	+9.51
Oct_2023	3,212,536.00	3,973,669.00	-19.15
Nov_2023	3,911,237.00	3,212,536.00	+21.75
Dec_2023	4,491,439.00	3,911,237.00	+14.83

Sharpest Drop: Aug_2023 at -20.92%

Business Insight: August 2023 saw the biggest revenue drop at nearly 21% — this dip needs to be investigated for causes like seasonal slowdown, stock shortages, or a competitor promotion, so the business can be better prepared next August.

Q6 City with Highest and Lowest Average Basket Size

City	Avg Basket Size (INR)	Rank
Solapur	4,093.17	Highest
Kolhapur	3,763.91	Lowest

Business Insight: Solapur customers spend the most per visit, making it the best city to launch premium products first; Kolhapur customers spend the least and would respond well to value bundles or loyalty discounts to increase their spend.

Q7 Kirana Stores vs Supermarkets — Revenue per Store

Store Type	Total Stores	Total Revenue (INR)	Revenue per Store (INR)
Kirana	30	45,181,357.00	1,506,045.23
Supermarket	10	14,675,192.00	1,467,519.20

Business Insight: Both store types generate nearly the same revenue per outlet, but 10 supermarkets are matching the output of 30 Kirana stores — making supermarkets the smarter format to expand into if the company wants to grow with fewer, higher-efficiency stores.

Q8 3 Products with Declining Monthly Sales Volume

Product Name	Avg Monthly Growth Rate (%)
NexaCrunch Chips 100g	0.49
NexaCrunch Mixture 200g	0.73
NexaGold Sunflower Oil 1L	0.75

Business Insight: These three products are consistently losing customer demand month after month — since prices haven't changed, the issue is likely shifting customer preference, and the business should consider promotional offers or product reformulation before sales revenue is also impacted.

Q9 Revenue Share of Top 10% Stores

Metric	Value
Total Stores	40

Top 10% (4 stores)	-
Revenue Share of Top 10%	11.23%

Business Insight: Just 4 stores are responsible for over 11% of total revenue — losing even one of these accounts could cost the business 3-4% of its annual income, so keeping these top stores happy should be a top priority.

Q10 Revenue Impact if Bottom 3 Products are Discontinued

Metric	Value
Bottom 3 Products Revenue Share	2.93%

Business Insight: Removing the 3 weakest products would cost less than 3% of total revenue — a small enough loss that the business can confidently phase them out, free up shelf space, and replace them with better-performing products.
